General Introduction

This data set contains macro data from 284 prefecture-level cities from 2008 to 2017 as part of a paper that Dr. Zhao is going to apply for publication.

The original data come from the China Urban Statistical Yearbook and the National Statistical Yearbook from 2008 to 2017. The missing data comes from provincial statistical yearbooks and regional statistical bulletins, and the missing data of individual cities are supplemented by interpolation. Excluding the newly established prefecture-level cities and the prefecture-level cities upgraded by county-level cities from 2008 to 2017.

Purpose of the test campaign

The purpose of collecting these data is to establish a model and explore the relationship between capital agglomeration and urban industrial upgrading.
